

Welcome to E2fa24! As stated in the syllabus: i) The exam is scored out of 10 points with no partial credit, ii) you are allowed one page (front and back) that you can use for reference, as well as a page of scratch paper. For the problems below, a) unless explicitly asked about a sign (or possible answers include both + and - signs), assume you are being asked about the magnitude (i.e., absolute value) of a quantity, b) use a 1% criterion to judge whether an answer is 'correct' - i.e., if $(\text{YourAnswer} - \text{ListedAnswer})/(\text{YourAnswer} + \text{ListedAnswer}) < 0.01$ in magnitude). If there is no answer which you feel is correct, mark E or "None Of The Above/Need More Information (NOTA/NMI)". There will inevitably be typos, errors, etc; if so, be assured that these will be sorted out in the days following the exam.

Although you may use your phones/laptops as calculators, and/or to enter answers into Canvas app, communication with other students during the exam is prohibited. By proceeding, you acknowledge that evidence of such communication can be used in any possible subsequent academic misconduct filings.
